What is it?

Command line tool for QC of ISIMIP climate impact data

- › Works on Linux, macOS, Windows
- › The ISIMIP QC-tool tests against protocol schemas:
 - ▶ File name
 - ▶ Variables, dimensions and global attributes
 - ▶ Data model and types
 - ▶ Consistency of NetCDF time axis
 - ▶ Data values range (when defined)

Celebrating 30 years of integrated climate impact research at the Potsdam Institute.

Installation

<https://github.com/ISI-MIP/isimip-qa>

Celebrating 30 years of
integrated climate impact research
at the Potsdam Institute.

Requirements

- › Check modules already installed:
 - module list (Ubuntu/Debian)
 - pip list (macOS)
- › Python3:
 - sudo apt-get install python3 python3-dev python3-venv (Ubuntu/Debian)
 - brew install python (macOS)
- › Git:
 - sudo apt-get install git (Ubuntu/Debian)
 - brew install git (macOS)

```

Setup

```
# setup venv on Linux/macOS/Windows WSL
python3 -m venv env
source env/bin/activate

# setup venv on Windows cmd
python -m venv env
call env\Scripts\activate.bat

# install from GitHub
pip install git+https://github.com/ISI-MIP/isimip-qc

# update from Github
pip install --upgrade git+https://github.com/ISI-MIP/isimip-qc
```

Usage

› Usage command:

```
isimip-qc [-h] [--config-file CONFIG_FILE]
  [-c] [-m] [--unchecked-path UNCHECKED_PATH]
  [--checked-path CHECKED_PATH]
  [--protocol-location PROTOCOL_LOCATIONS]
  [--log-level LOG_LEVEL]
  [--log-path LOG_PATH] [-f] [-w] [-e]
  [-r [MINMAX]] [--fix]
  [--fix-datamodel [FIX_DATAMODEL]]
  [--check CHECK]
  schema_path
```

› The only mandatory argument is the `schema_path`

› Options are described at <https://github.com/ISI-MIP/isi-mip-qc#usage>

```
Check ISIMIP files for matching protocol definitions

positional arguments:
  schema_path          ISIMIP schema_path, e.g. ISIMIP3a/OutputData/water_global

optional arguments:
  -h, --help          show this help message and exit
  --config-file CONFIG_FILE
                    File path of the config file
  -c, --copy          Copy checked files to CHECKED_PATH if no warnings or errors were found
  -m, --move          Move checked files to CHECKED_PATH if no warnings or errors were found
  -O, --overwrite     Overwrite files in CHECKED_PATH if present. Default is False
  --unchecked-path UNCHECKED_PATH
                    base path of the unchecked files
  --checked-path CHECKED_PATH
                    base path for the checked files
  --protocol-location PROTOCOL_LOCATIONS
                    URL or file path to the protocol when different from official repository
  --log-level LOG_LEVEL
                    Log level (ERROR, WARN, INFO, or DEBUG)
  --log-path LOG_PATH
                    base path for the individual log files
  --include VARIABLES_INCLUDE
                    include only this comma-separated list of variables
  --exclude VARIABLES_EXCLUDE
                    exclude this comma-separated list of variables
  -f, --first-file    only process first file found in UNCHECKED_PATH
  -w, --stop-on-warnings
                    stop execution on warnings
  -e, --stop-on-errors
                    stop execution on errors
  -r [MINMAX], --minmax [MINMAX]
                    test values for valid range (slow, argument MINMAX defaults to show the top
  -nt, --skip-time-span-check
                    skip check for simulated time period
  --fix              try to fix warnings detected on the original files
  --fix-datamodel [FIX_DATAMODEL]
                    also fix warnings on data model found using NCCOPY or CDO (slow). Choose pro
  --check CHECK      perform only one particular check
```

Try the demo script

- › Download the demo script at https://www.isimip.org/documents/625/isimip_qc-tool.txt
- › Check our recommended fixes in the ISIMIP page “*Preparing simulation files*”
- › Contact the ISIMIP data management team, they’ve gathered a long list of scripts with quick fixes

```
#!/bin/bash

# This^^ command sets bash, in the '/bin/' directory, as the default shell for executing
# commands in this file. Check bash location with: $ which bash

. /YOUR-PATH-TO-TOOL/qc-env/bin/activate

# Schema definitions:
ROUND='ISIMIP2b'
DATATYPE='OutputData'
SECTOR='water_global'

# Define working directories:
UNCHECKED_DIR=/YOUR-PATH/TO/DOWNLOADED-FILES
CHECKED_DIR=/YOUR-PATH/TO/PROCESSED-FILES
LOG_DIR=/YOUR-PATH/TO/LOG-FILES
echo $UNCHECKED_DIR
echo $CHECKED_DIR
echo $LOG_DIR

# Uncomment to only show the working directories:
#exit

# Create working directories if needed:
[ ! -d $CHECKED_DIR ] && mkdir -p $CHECKED_DIR
[ ! -d $LOG_DIR ] && mkdir -p $LOG_DIR

# Additional definitions for options
CHECKONE=check_time_dimension # check_variable
PROTOCOL_LOC=/YOUR-PATH/qc-env/isimip-protocol-2
VARNAME=csoil

# Command line:
isimip_qc $ROUND/$DATATYPE/$SECTOR/ \
  -f \
  --include $VARNAME \
  --log-level=INFO \
  --log-path=$LOG_DIR \
  --unchecked-path=$UNCHECKED_DIR \
  --checked-path=$CHECKED_DIR \

# Other options:
# --check $CHECKONE
# --protocol-location=$PROTOCOL_LOC \
# --skip-time-span-check \
# --fix --move # --copy
# --fix --fix-datamodel=cdo -copy
# --minmax

# NOTE: the '-fix-datamodel=cdo' option also fixes warnings on data model found using
# NCCOPY or CDO (this can be slow).

# NOTE: I store this script as an executable '*.sh' file (-rwxr-xr-x) at '/YOUR-PATH-TO-
# TOOL/qc-env/'
