

WG 4: BEST PRACTICES ON ADDRESSING TYPICAL CLIMATE IMPACT STAKEHOLDERS

Albert Nkwasa & Ann van Griensven

Context

Too much effort goes in data and models,
and **not enough** in reaching out to people

Overall target

Initiate a **community effort** to formulate best practices on
addressing **climate impact stakeholders and citizens**

Outline

1. Presentation(s) case studies
 - Stakeholders in climate litigation
(Rosa pietroiusti)
 - Incorporating stakeholder feedback into modelling
(Annika Schlemm)
2. Reflections on the open-ended questions
3. Way forward towards documenting “Best practices on addressing typical climate impact stakeholders”

Reflections on the open-ended questions

Open ended questions

1. Who are the stakeholders that make up PROCLIAS? -> Build up from work started by Liliana and Gabriela
2. How can we engage other stakeholders outside of PROCLIAS given its diversity and scope?
3. How can we engage stakeholders beyond science-policy interfaces?
4. How do we incorporate recommendations from stakeholders into our impact simulation model studies?
5. How do we develop guidelines on how to address typical climate impact stakeholders?
6. Can we plan outreach/stakeholder engagement activities during the remaining PROCLIAS time?

Way forward towards documentation

Way forward – Documenting best practices (**Community effort**)

- (a) Who would like to be a part of this?
- (b) Who works with ISIMIP data and interacts/targets stakeholders (and) citizens?
- (c) Which indicators are you using to communicate with stakeholders (and) citizens?
- (d) What information do you give/get from stakeholders?
- (e) How do you monitor or assess the success of our engagement or interaction with stakeholders (and) citizens?
- (f) How to better link to international initiatives?
- (g) Citizen science?

Way forward – Content

- Engaging stakeholders and citizens
 - Open data
 - Easy to access/retrieve
 - Proper identification and consultation of stakeholders
 - Indicators that are relevant (cfr IPCC)
 - Opportunity to support adaptation (at local scale)
 - Engage with international initiatives/organisations
 - Engage citizens (citizen science -> empowerment-> climate litigation)

Strategy

- Timeline
- Leading
- Working document – Google form
- Open call to all PROCLIAS members to participate

Anyone willing to replace Ann as a co-lead for WG4?

Thank you
