Understanding the representation of climate impacts and adaptation in integrated assessment models

OptimESM-ISIMIP workshop 2025 – May 6th

Mathijs Harmsen

Sr. Researcher, PBL Netherlands Environmental Assessment Agency

Mathijs.Harmsen@pbl.nl

Authors: *Francesco Granella, Mathijs Harmsen, Johannes Emmerling, Laurent Drouet, Franziska Piontek, Detlef van Vuuren et al.*

"Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Climate, Infrastructure and Environment Executive Agency (CINEA). Neither the European Union nor the granting authority can be held responsible for them."
This project has received funding from the European Union's Horizon Europe programme under grant agreement No 101081604.

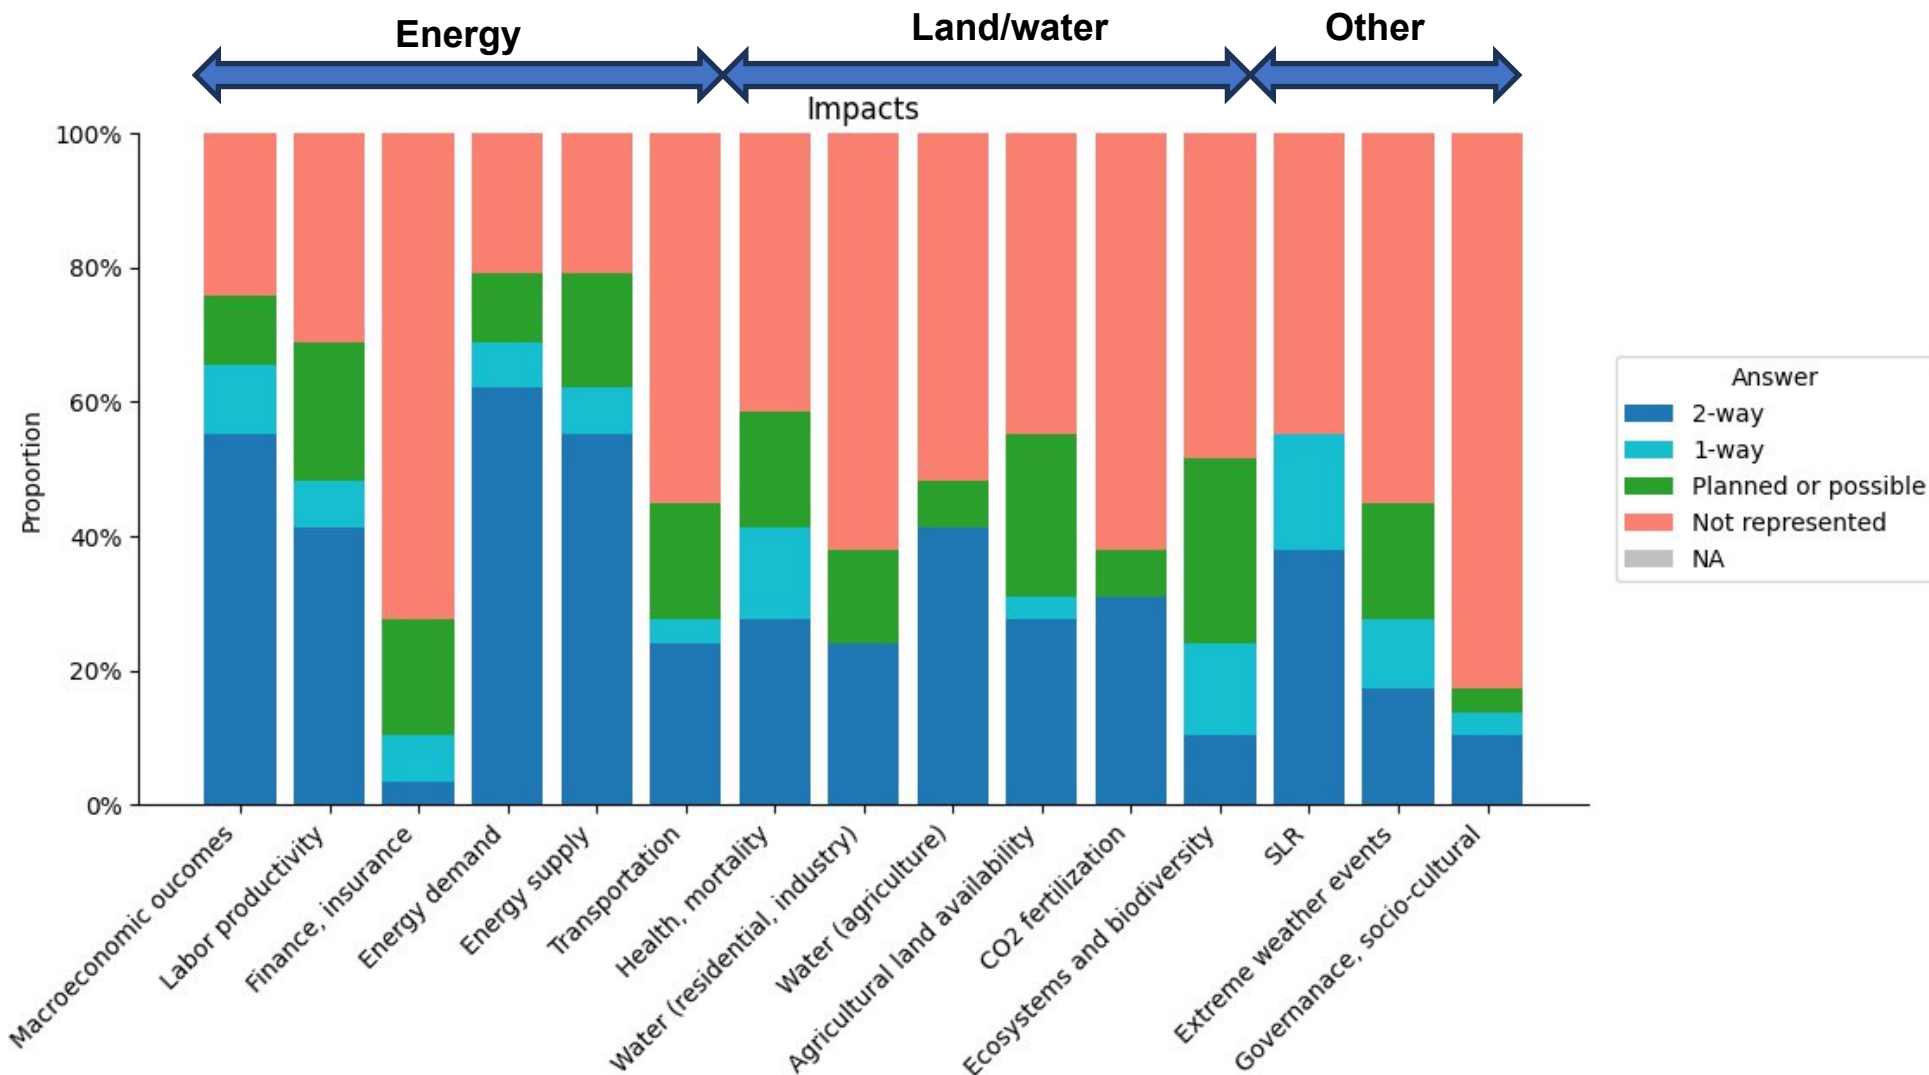

- Integrated assessment models (IAMs) widely used in climate policy research
 - Mitigation well represented
 - Climate impacts typically less
- Knowledge gaps in the current literature
 - Climate impact assessments (ISIMIP) focus on individual sectors, less on interactions
 - Cost Benefit Analyses (CBA IAMs), integrate mitigation, adaptation, impacts, however aggregated, stylized and based on [older data](#) (last study: 2009)
 - Process IAMs typically do not include impacts and adaptation in assessments ([Van Maanen et al., 2023](#))
 - Aim: understand how IAMs can benefit from impact model knowledge (e.g. [Holman et al, 2019](#))
- This study
 - Aims to understand in detail how IAMs represent impact and adaptation
 - Potential for future improvement
 - Which mechanisms and feedbacks

- Survey: Questionnaire sent out to 100 IAM teams
- Results from 29 teams:
 - AIM, AIMTech, BLUES, C3IAM, CCEM, E4SMA-EU-TIMES 1.0, ENV-Linkages, ENVISAGE, GCAM-KSA, GEMINI-E3, GRACE, ICES-EMF, ICES, IMACLIM, IMAGE, IU-VNUHCM, MAgPIE, MEDEAS, MESSAGEix-GLOBIOM, MIMOSA, MUSE, NEMESIS, PROMETHEUS, REMIND, REMod, RICE50+, TIMES_PT, TIMES_Sweden, WITCH
 - Analysis included in overview table: 17 teams: AIM, AIMTech, BLUES, CCEM, GCAM-KSA, GEMINI-E3, GRACE, IMAGE, IU-VNUHCM, MAgPIE, MESSAGEix, MIMOSA, PROMETHEUS, REMIND, RICE50+, TIMES_Sweden, WITCH

Results: Impacts

Results: Adaptation

Mal = Maladaptation / Adaptation side-effects

- Implicit impacts and adaption in default scenarios
- Adaptation less represented. When, then often binary (on or off)
- Somewhat “flattered” results. Partial representation of impacts and adaptation
- Missing information. Which impact mechanisms per category?
- **Call to impact community (!):**
 - Feedback on our results, opportunities for improvement
 - Suggestions for collaboration
