---

S&P Global

## *Comments and discussion*

### **S&P Context**

- Climate-risk evaluation: worldwide, multi-hazard, asset-level, high-resolution, 20-30 GCMs, 4 scenarios, to 2100
- Climate-risk scoring: regional, sectoral
- Economics and finance: GDP impacts, financial indicators, “beyond GDP” (natural, human, physical capitals), scenario probabilities

### **Comments**

- “Sectoral” is substantially different, but mapping possible
- Scenario quartet should be covered
- Comparison of hazard inputs needed
- Monetization of impacts
- “Overshoot” scenario?
